

User guide for generating bespoke tabulations in Showcase

Introduction

The data Showcase displays a univariate distribution of each data-field currently held within the central database. In some circumstances, researchers have requested cross-tabulations of data-fields to inform them of the numbers of participants in certain categories to guide them either during submission of a main application to use the resource. For example, cross-tabulations would be able to inform you of how many cases of breast cancer or self-reported diabetes there are by age category and by sex.

UK Biobank has developed a cross-tab facility so registered researchers can generate their own cross-tabulations between 2 or 3 data-fields in UK Biobank Data Showcase.

Who can generate cross-tabulations?

Only researchers who are registered with UK Biobank may use the cross-tabulation facility. For more information on how to get registered, please see the [‘Register & apply’](#) section on the main UK Biobank website. Currently, this facility is only available at the Main Application stage when you choose the data-fields you want via showcase for your research project.

Which data-fields can be cross-tabulated?

Some data-fields contain a large number of coding values (such as Treatment/medication code ([20003](#)), Non-cancer illness code, self-reported ([20002](#)), data-fields containing ICD or OPCS codes) and might not be accepted for tabulation or the result tables may be truncated. See Appendix A for a full list of data-fields with a high number of coding values.

If you require a cross-tabulation of a selected disease, procedure or treatment (for example), then please contact the Access Team requesting bespoke frequency tables.

Step-by-step guide to requesting cross-tabulations

(Example: Diastolic blood pressure (4079) by sex (31))

1. Log into the [Access Management System](#) (AMS).
2. Open **‘Data Showcase’** and navigate to the data-field of interest (e.g. Diastolic blood pressure, automated reading (4079)). [note, currently you can only do this at a Main Application stage].

Data-Field 4079

Application 77

Description: Diastolic blood pressure, automated reading

Category: Blood pressure - Physical measures - UK Biobank Assessment Centre

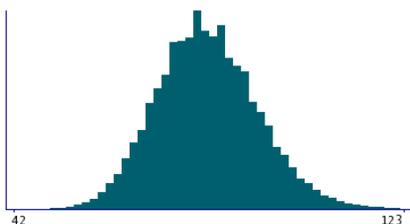

Participants	473,164	Value Type	Integer, mmHg	Sexed	Both sexes
Item count	970,020	Item Type	Data	Instances	Defined (2)
Stability	Complete	Strata	Primary	Array	Yes (2)

New fields may not be added to Application 77.

Data Notes 4 Categories 3 Related Data-Fields 0 Tabulations 5 Resources

970,020 items of data are available, covering 473,164 participants.
 Defined-instances run from 0 to 1, labelled using Instancing 2.
 Array indices run from 0 to 1.
 Units of measurement are mmHg.

Maximum	148
Decile 9	96
Decile 8	91
Decile 7	87
Decile 6	84
Median	82
Decile 4	79
Decile 3	76
Decile 2	73
Decile 1	69
Minimum	30

- There are 112 distinct values.
- Mean = 82.1214
- Std.dev = 10.4875
- 30 items below graph minima of 42
- 460 items above graph maxima of 123

Counts of participants/items last updated 11 April 2013.

3. Go to the 'Tabulations' tab and select 'Request New'.

Data-Field 4079

Application 77

Description: Diastolic blood pressure, automated reading

Category: Blood pressure - Physical measures - UK Biobank Assessment Centre

Participants	473,164	Value Type	Integer, mmHg	Sexed	Both sexes
Item count	970,020	Item Type	Data	Instances	Defined (2)
Stability	Complete	Strata	Primary	Array	Yes (2)

New fields may not be added to Application 77.

Data Notes 4 Categories 3 Related Data-Fields 0 Tabulations 5 Resources

There are no tabulations involving field 4079.

Click **Request New** to ask that an additional analysis including field 4079 be constructed.

4. Enter the ID of second (and third) data-field to cross-tabulate (e.g. sex (31)) and press 'Submit'.

5. 'Request Tabulation' screen will appear to acknowledge new tabulation request.

6. Tabulations usually take 1 to 2 working days to be generated and they will appear in the 'Tabulations' tab in the data-field it was requested from.

Tabulations for numerical data-fields

All numerical data-fields will be converted to categorical for the purpose of tabulation and will be assigned arbitrary display bins by the Data Analysts team. For example 'Age when attended assessment centre' (21003) can be categorised into 5-year bins: <40, 40-45, 45-50, 50-55, 55-60, 60-65, over 65.

If you have a specific requirement of how the categories should be defined, please contact the Access Team quoting your Tabulation ID.

Example of 3x3 contingency tables

Below is an example of cross-tabulation of 3 data-fields:

- Age when attended assessment centre (21003)
- UK Biobank assessment centre (54)
- Sex (31)

For 3x3 tables, the tabulations are spilt into as many tables as many distinct values are there in the data-field with least coding values. In the example below, sex has 2 coding values (Males / Females) so the tabulation is displayed as two tables. The data-field with second least coding values will be displayed in table in a row across, while the data-field with most coding values will be displayed vertically.

The tabulations are showed separately for baseline and repeat assessment.

Tabulation 100

Application 684

This tabulation involves 3 fields

1. Age when attended assessment centre (Base characteristics)
2. UK Biobank assessment centre (Reception)
3. Sex (Base characteristics)

Analysis released today.

Appendix A: Data-fields with high number of coding values

Field ID	Description
132	Job code
20024	Job code - deduced
40004	Last known occupation
20003	Treatment/medication code
20004	Operation code
20002	Non-cancer illness code, self-reported
40001	Underlying (primary) cause of death: ICD10
40002	Contributory (secondary) causes of death: ICD10
40006	Type of cancer: ICD10
41201	External causes
41202	Diagnoses - main ICD10
41204	Diagnoses - secondary ICD10
40011	Histology of cancer tumour
40013	Type of cancer: ICD9
41203	Diagnoses - main ICD9
41205	Diagnoses - secondary ICD9
20115	Country of Birth (non-UK origin)
41229	PCT responsible for patient data
41230	PCT where patients GP was registered
41200	Operative procedures - main OPCS
41210	Operative procedures - secondary OPCS
41246	Treatment speciality of consultant (recoded)
